

ANUSHA RAMACHANDRAN

anusharama100@gmail.com | (925) 750-3546 | Portfolio: anusharamachandran.com

Product Designer with experience designing AI and cloud products, translating complex technical workflows into intuitive, scalable experiences. Skilled in end-to-end product design, interaction design, prototyping, user research, and cross-functional collaboration.

EDUCATION

University of California, Davis | B.S. Computational Cognitive Science, Minor in Computer Science

EXPERIENCE

Crusoe — Product Design Intern

(May 2026 – Aug 2026)

- Designed end-to-end experiences for Crusoe Cloud Console, translating complex infrastructure workflows across **compute, storage, networking, Kubernetes, IAM, billing, and observability** into intuitive product experiences.
- Led console-wide **empty-state and first-time UX** efforts, defining reusable patterns across product surfaces and improving guidance for technical users.
- Partnered with **PMs, engineers, brand, and technical writers** from research and exploration through high-fidelity design and implementation, translating technical constraints and user needs into **production-ready experiences**.
- Owned design initiatives from problem definition through implementation**, translating ambiguous product needs into scalable interaction patterns and high-fidelity designs through iteration with product and engineering.

ToniPR — Product Design Intern / Freelance Designer

(Mar 2026 – May 2026)

- Designed core experiences for an **AI-powered PR platform**, spanning onboarding, AI-guided interviews, dashboards, pricing, content discovery, and authentication.
- Redesigned onboarding and AI interview flows, contributing to **42% growth in completed sign-ups, 74% interview completion, and 180+ publish-ready content kits**.
- Took features from concept to developer-ready Figma designs while collaborating directly with the founder on **user flows, interaction patterns, responsive states, and reusable components**.

Narb. - Product Design Intern | AI Model Comparison Platform

(Jun 2025 – Sep 2025)

- Led end-to-end product and interaction design for an AI research platform, from user research and concept exploration through high-fidelity prototyping and launch.
- Partnered closely with engineering to ship production-ready experiences, translating research insights into clear, scalable interaction patterns for **10K+ users**.

PROJECTS

Crusoe Cloud Console — Usage & Cost Management | Product Design, Cloud Infrastructure

(May 2026 – Aug 2026)

- Designed end-to-end **usage, cost, and billing experiences** for Crusoe Cloud, helping technical users understand resource consumption and connect infrastructure usage to spend.
- Translated complex cloud usage and cost data into clear **information hierarchies, data visualizations, and interaction patterns** for easier cost exploration and decision-making.
- Partnered with product and engineering from early exploration through high-fidelity design, incorporating **technical constraints, edge cases, and scalability** into implementation-ready cloud workflows.

Crusoe Cloud Console — First-Time UX & Design Systems | Product Design, Cloud Infrastructure

(May 2026 – Aug 2026)

- Led a **console-wide audit of empty and first-time states** across compute, storage, networking, Kubernetes, IAM, billing, and observability, uncovering inconsistencies across a wide range of product surfaces.
- Established reusable UX patterns across **pages, tables, charts, dropdowns, cards, and modals**, creating clearer guidance and next steps when users had no resources or data.
- Collaborated with **product, engineering, brand, and technical writing** to standardize interaction patterns, illustrations, copy, and CTAs across the Cloud Console.

Nexus — Multi-Model AI Research Platform | Product Design, AI

(Jun 2025 – Sep 2025)

- Led product design for a **multi-model AI research platform** that helped students compare, synthesize, and evaluate responses across AI models.
- Synthesized research with **48+ students** to uncover trust, fact-checking, and cognitive-overload challenges, informing model attribution, aggregated responses, streaming states, and simplified onboarding.
- Partnered with engineering to launch to **10K+ users**, contributing to **40% growth in sign-ups, 2x faster onboarding, and 85% positive user feedback**.

SKILLS & TOOLS

Product Design: Product Thinking, Interaction Design, UX/UI Design, Information Architecture, User Flows, Wireframing, Rapid Prototyping, Design Systems, Visual Design, Responsive Design, Accessibility, Data Visualization, Enterprise UX, AI Product Design

UX & Research: User Interviews, Usability Testing, Surveys, Competitive Analysis, Affinity Mapping, Journey Mapping, Task Analysis, Research Synthesis, Heuristic Evaluation

Design & Prototyping: Figma, FigJam, Figma Make, Framer, Adobe Creative Suite, Miro, Whimsical, Notion, Relume, UX Pilot

AI & Design-to-Code: Cursor, Claude, v0, Lovable, Magic Patterns, Subframe, Google Stitch, Uizard, Galileo AI

Technical: HTML, CSS, JavaScript, TypeScript, React, Next.js, Tailwind CSS, Python, SQL, Git
